CABICODES

What is a CABICODE?

A CABICODE is a unique classification code used for indexing records. Each database record is assigned with at least one CABICODE which describes the specific area of science the resource refers to. It is a very useful tool when performing advanced searches helping to limit searches down to a specific subject of scientific interest.

The CABICODES are a hierarchical list of classification codes that divide the subject coverage of the CAB ABSTRACTS database into 23 major sections. Each section then includes a series of codes that divides that subject into more specific subjects. The codes themselves are typically used to code for subjects that would be difficult to describe with keywords alone.

The CABICODES can be searched just like any other field tag. Two field tags are assigned to the CABICODE field and these are described below. Please note, as other field tags these must be entered in lowercase.

Field tag	Definition	Example
cc:	Allows users to search the index of the alphanumerical assigned code e.g. LL010	cc:LL010
cabicode:	Allows users to search both the alphanumerical assigned code index as above and the CABI code title index e.g. Apiculture	cabicode:LL010 or cabicode:Apiculture

Please see below for a full list of CABICODES and their associated subject area.
